

1  
2 CLAIMS

3 1. A computer readable medium having computer-executable  
4 instructions, the instructions comprising:

5 receiving a string in an interactive environment;

6 identifying an attribution within the string;

7 identifying a construct associated with the attribution; and

8 saving information that correlates the attribution with the construct.

9 2. The computer readable medium of claim 1, wherein the attribution  
10 specifies a constraint for the construct.

11 3. The computer readable medium of claim 1, wherein the construct  
12 comprises a variable, a structure, a function, or a script.

13 4. The computer readable medium of claim 1, wherein the information  
14 comprises metadata.

15 5. The computer readable medium of claim 1, further comprising  
16 applying the attribution to the construct when the construct is encountered  
17 interactively.

18 6. The computer readable medium of claim 1, wherein the string  
19 comprises a command string entered in a command line environment.

20 7. The computer readable medium of claim 1, wherein the string  
21 comprises a portion of a script.

22 8. The computer readable medium of claim 1, wherein identifying the  
23 attribution comprises identifying a plurality of attributions associated with the  
24 construct.

1           9.     The computer readable medium of claim 1, wherein the attribution  
2 specifies a type for the construct.

3           10.    The computer readable medium of claim 1, wherein the attribution  
4 specifies applying intellisense to the construct to auto-complete the construct.

5           11.    The computer readable medium of claim 1, wherein the attribution  
6 specifies applying a predicate directive to the string that is operative to determine  
7 whether processing of the string continues.

8           12.    The computer readable medium of claim 1, wherein the attribution  
9 specifies applying a parsing directive that is operative to direct a manner for  
10 obtaining the construct.

11          13.    The computer readable medium of claim 1, wherein the attribution  
12 specifies a data generation directive that is operative to generate a set of  
13 information that is stored in the construct.

14          14.    The computer readable medium of claim 1, wherein the attribution  
15 specifies a data validation directive that is operative to determine whether a value  
16 assigned to the construct meets a criterion specified by the attribution.

17          15.    A method for handling constraints specified within an interactive  
18 environment, the method comprising:

19           identifying a pre-defined begin symbol and end symbol within a string  
20 entered in an interactive environment;

21           identifying a constraint name between the begin symbol and the end  
22 symbol; and

23           identifying a construct following the end symbol.  
24  
25

1           16.    The method of claim 15, further comprising applying the constraint  
2 to the construct whenever the construct is encountered within the interactive  
3 environment.

4           17.    The method of claim 16, wherein the constraint comprises a  
5 predicate directive and applying the constraint comprises determining whether a  
6 condition has been met before continuing processing of the construct.

7           18.    The computer readable medium of claim 16, wherein the attribution  
8 specifies applying intellisense to the construct to auto-complete the construct.

9           19.    The computer readable medium of claim 16, wherein the attribution  
10 specifies applying a parsing directive that is operative to direct a manner for  
11 obtaining the construct.

12           20.    The computer readable medium of claim 16, wherein the attribution  
13 specifies a data generation directive that is operative to generate a set of  
14 information that is stored in the construct.

15           21.    The computer readable medium of claim 16, wherein the attribution  
16 specifies a data validation directive that is operative to determine whether a value  
17 assigned to the construct meets a criterion specified by the attribution.

18           22.    The method of claim 15, wherein the begin symbol comprises a left  
19 bracket and the end symbol comprises a right bracket.

20           23.    A system the handles input parameters, the system comprising:  
21           a means for processing; and  
22           a memory means, the memory means being allocated for a plurality of  
23 computer-executable instructions which are loaded into the memory means for  
24 execution by the means for processing, the computer-executable instructions  
25 performing a method comprising:

1 a means for receiving a string in an interactive environment;  
2 a means for identifying an attribution within the string;  
3 a means for identifying a construct associated with the attribution; and  
4 a means for saving information that correlates the attribution with the  
5 construct.

6 **24.** The system of claim 23, further comprising a means for applying the  
7 attribution to the construct when the construct is encountered interactively.
